<ul style="list-style-type: none"> - Warning! The opening of the branch-circuit protective device may be an indication that a fault current has been interrupted. To reduce the risk of fire or electric shock, current-carrying parts and other components of the controller should be examined and replaced if damaged. If burnout of the current element of an overload relay occurs, the complete overload relay must be replaced. - When intended for use as a motor disconnecter the device shall be provided with a method of being locked in the OFF-position.
