| General Information<br>Text                               |                    |                               |                              |  |
| - The wiring aid has to be removed before voltage i       | s applied!         |                               |                              |  |

- EMC Note: This device is suitable for use in environment A and B.

- After wiring, ALL terminal screws must be tightened to the specified torque values.

- The protection class of the selected mounting type may vary if optional extras are used.

- Do not lubricate or treat contacts.

- Switches may only be mounted, connected and set into operation by qualified persons according to the accepted rules of technology.

Operating temperature

| Min. Temperature [°C] | Max. Temperature [°C] |
|-----------------------|-----------------------|
| -5                    | 55                    |

<sup>-</sup> Terminals with factory fitted jumper links are tightened during production for loss prevention. When opening the terminal clamps, make sure that no factory fitted links get lost and that all wire connections are properly seated.
