

EKA ENCLOSURE

The EKA enclosure is developed to withstand high pressure cleaning and keeps your installation functioning under extreme circumstances making it suitable for areas like the food-industry, public area's etc. The enclosure will come with a Ventilation Plug. Condensate occurs in enclosures and housings with high protection type by variations in temperature. The ventilation device allows the conveying of the condensate without losing the maximum protection of IP66. The water permeable membrane provides the ventilation of the enclosure by the capillary attraction. The construction prevents the infiltration of splash water into the enclosure.

EKA

► FEATURES

- Water tightness IP66/67
- Cable glands 2 x M25
- Ventilation Plug 1 x M12
- Self-extinguishing
- Chemical resistant
- Resistant to oil and acids
