Zero Energy Isolation

Options Include
- Interlock with limit switch
- Interlock with main switch
- Solenoid controlled
- Time delay
- Atex key switch
- Key exchange box
- Dust covers
- Zinc/316 SS construction

Safety Gate Access

Machine guarding application example
1. The K&N safety MAIN SWITCH is turned OFF. Only when the power is isolated is it possible to remove the trapped key.
2. The MAIN SWITCH key is inserted into the valve module. This allows the pneumatics, hydraulics etc. to be isolated and dumped.
3. Trapping the MAIN SWITCH key in the valve module allows the removal of the gate access key gaining access to the restricted area.
4. Gate key is taken by operator ensuring his safety while in restricted area.
   - Reverse the steps to re-start.

Remove access keys
